

DRY BAG 60 V4.0

Application of the dry bag 60L:

This dry bag is designed for combat diver, scout swimmers or SDV teams or for any environment who requires a waterproof capability

Rucksack design include:

- Ability to compensate and adjust for buoyancy via an attached compressed air tank with a separate bladder equipped with a direct system inflator hose
- Ability to carry and quickly release dive weights used for buoyancy compensation
- Oral inflation/deflation tube on the outside of the bag with spring loaded check valve and threaded lock. A protective loop will stow the oral inflation tube to prevent snagging.
- The construction of the external backpack has a drainage system allowing rapid evacuation of water.
- The waterproof internal compartment has a MOLLE plate placed at the bottom to attach equipment and mesh pocket
- MOLLE attachment webbing
- Heavy duty carrying handle
- Tear and abrasion resistant
- Vertical and horizontal synch straps on the exterior of the bag with quick release connectors capable of collecting and securing waterproof bag material to adjust bag to the contents and to prevent load shifting during transit.
- The internal compartment is made of thick, black trilaminate cordura and has a Dynat waterproof metal zipper – also equipped with an inflation and purge system
- The external backpack is made of 1000 cordura.
- Color in green or black
- Optional air tank 0,5L/200Brs DIN
